PUBLIC NOTICE: HYDRANT FLOW TESTING

Epsom Village Water District

Date(s): Wednesday, November 18th
Time: Begins at 8:00 am

Please be advised that hydrant flow testing will be conducted throughout the water distribution system on the date listed above.

This testing is necessary to evaluate available water flow and pressure, assess system performance, and assist with fire protection and water distribution planning.

During testing, customers may experience:

- Temporary fluctuations in water pressure.
- Discolored or cloudy water due to the disturbance of naturally occurring sediment within the water mains.
- Brief periods of reduced water flow.

Important Information for Customers

If you experience discolored water, please avoid doing laundry or using hot water until the water clears. Run a cold-water faucet for several minutes and check for improvement. If discoloration persists, please contact the water department.

Hydrant flow testing may temporarily disturb sediment within the distribution system. Discolored water should not automatically be assumed safe for drinking. Customers with concerns should contact the water district for guidance. Contact information is located below.

We appreciate your patience and cooperation as we perform this important evaluation of the public water system.

For questions or concerns, please contact:
